Outline

- 
- A cartoon illustration of a man with brown hair, wearing a grey suit jacket, a white shirt, and a bright pink tie. He is pointing his right index finger towards the list on the right. A line extends from his hand, pointing towards the 'Outline' title.
- ✓ **Definitions of the ethical principles.**
 - ✓ **The eight main ethical principles in nursing.**
 - ✓ **Examples of each ethical principle in nursing.**

Definition

- Ethical principles refer to **general judgments** that serve as a **justification** for particular **ethical prescriptions** and **evaluations** of human actions.

The Eight Major Nursing Principles are:

Respect

Autonomy
(self-governing)

Beneficence
(to do good)

Non- malfeasance
(to do no harm)

Confidentiality

Justice/ Fairness
(Ethical rule)

Veracity
(telling the truth)

Fidelity

1-

It's one of the main principles of ethics.

- It means treating people as *unique, equal* and *responsible* moral clients.
- This principle **emphasizes people's importance** as members of the community and health services team.
- It is applied **not** only in **clinical** settings, **but** also in all **life's** situations.
- All people should treat others as a **worthy** individual.
- Respect, specifically in nursing practice means consider the client's autonomy.

2-Autonomy (self-governing)

The word of autonomy is derived from the Greek words **Nomo (law)**.

Autonomy means **freedom of choice**

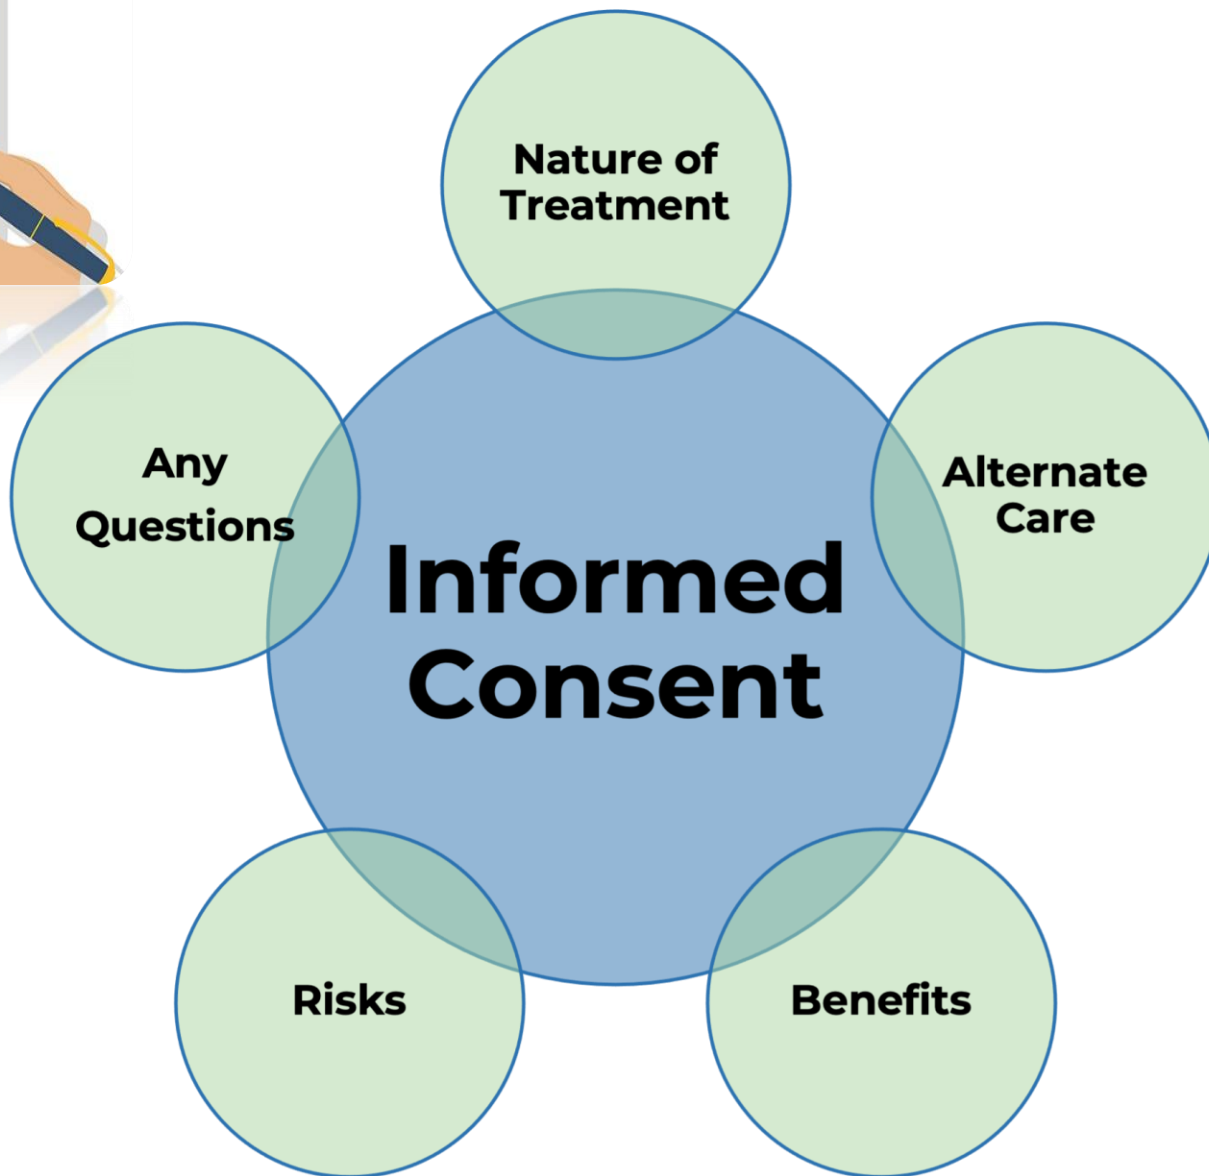

- Autonomy is the right of **self determination**
- Laws have been acted out to **protect** the patient's **right** independently.
- Respect of patient's **rights, values and choices** is synonym **مرادف** person's autonomy

Autonomy

- The nurse's should **respect patients' rights** to make their own decisions, even if the nurse does **not agree with the patients' decisions**.
- **Patient's autonomy** to make decision and action needs **adequate information**.

- ✓ The right to **refuse** medical or surgical care (freedom of choice).
- ✓ **Documentation** of such instruction must appear in the patient's record, which is the legal document.
- ✓ ***Informed Consent*** :the nurse should instruct patient about the followings:

Agile
with
Jimmy

Autonomy

doesn't mean

do whatever!

3-Beneficence

- Beneficence is defined as **"doing good"** for the benefit of others.
- Beneficence is the effort to save lives and relieve human suffering (do good), only within reasonable limits.

The Principle of Beneficence has three Components:

```
graph TD; A[The Principle of Beneficence has three Components:] --- B[Promote good.]; A --- C[Prevent harm.]; A --- D[Remove evil or harm.]
```

Promote good.

Prevent harm.

Remove evil or
harm.

4-Non-malefeasance

عدم ارتكاب المخالفات

Means "**do no harm**", which encompassing;

Negligence

Malpractice

- **Professional Negligence** is defined as an professional person ignores of basic responsibilities which leads to hurt another individual or group.

- The term Malpractice refers to a type of negligence, where a **professional licensed member fails** to provide services according to **standards**.

Malpractice

Misdiagnosis Or Delayed **Diagnosis**

This is when a doctor does not correctly diagnose a disease

Medication **Errors**

This can occur when a patient is not correctly medicated

Lack Of Informed **Consent**

This is when a patient is not given enough information about treatment

Surgical **Mistakes**

This usually occurs when standard surgical procedures are not followed

Defective Or Mishandled **Medical Equipment**

This happens when a doctor misuses equipment on a patient

**The most common
causes for
malpractice claims
against nurses**

**Medical Malpractice
Claim**

**Medical
Malpractice**

- ***Failure to assess and monitor.***

Ex : nurse doesn't monitor a patient's **vital signs** post-surgery.

Ex: nurse doesn't **change position** for immobile patient regularly, resulting in severe pressure ulcers.

- ***Failure to follow standards of care.***

Ex : Nurse doesn't follow the correct technique of hand hygiene, leading to infection.

Ex: Nurse doesn't apply wound care following surgery. (post-operative care standard require daily wound care).

- ***Failure to delegate tasks properly***

Ex: Nurse manager assigns too many patients to one nurse without considering workload or experience.

(Patient care is not done well, and important tasks are missed)

Ex: A nurse asks an untrained assistant to administer medications.

(Medication errors and patient harm occur)

- ***Failure to act as patient advocate*** : Ignoring Cultural or Religious Needs. Does not protect a patient's rights, or safety.

Ex: A patient requests a female nurse for cultural reasons, but staff ignore the request and assign a male nurse.

(The patient feels anxious and possibly refusing care).

Ex: A patient not able to afford a prescribed expensive medication. The nurse does not inform the doctor or suggest a social worker consult.

(The patient doesn't take the medication and his condition worsens.)

- *Failure to communicate.*

- Ex: Critically ill patient's family is not updated regularly about the patient's condition.

(Family is unprepared for possible outcomes and may lose trust in healthcare providers)

- Ex: Verbal medication order unclear
(Wrong dosage or medication administered)

- ***Failure to use equipment in a responsible manner.***

Ex: A nurse uses a defibrillator without proper training or ignores safety checks.

(Patient or nurse injury)

Ex: Surgical instruments are reused without proper sterilization.

(Increased risk of infection for patients.)

- ***Failure to document.***
- Ex: Important patient information (e.g., allergies, past medical history) is not recorded or updated in the medical record.
(healthcare providers make decisions without critical information).

Summary

Thank
you
