

Forms of Communication

Lecture 5

Levels of communication

1. Intrapersonal (Within a person)

2. Interpersonal (Face to face)

3. Public Communication

4. Mass communication

1- Intrapersonal Communication

- Intrapersonal communication is also known as self-talk or thinking and refers to the ways we communicate with ourselves.
- We use intrapersonal communication to plan our lives, rehearse scenarios before we act them out, and tell ourselves what to do or not do.
- The way we communicate with ourselves greatly affects our self-esteem. A person who tells himself, "I'm so stupid" when he fails an exam will likely have poorer self-esteem than someone who thinks, "I did really well on the previous four exams. I must have just been having an off day, and I'll do better next time."

2- Interpersonal Communication

- Interpersonal communication is the communication we have with other people. This type of communication varies from highly impersonal to extremely personal.
- The degree to which we communicate, or fail to communicate, with others influences how our relationships with them develop, continue or come to an end.

3- Public Communication

- Public communication refers to **public speeches** that we deliver in front of audiences. Public communication serves three main purposes: to entertain, to persuade and/or to inform.
- It is different from other forms of interaction in that it requires greater levels of planning and preparation on the part of the speaker and involves less direct interaction.
- Audience members still interact with the speaker **via mostly nonverbal symbols**, but there is a lesser degree of give and take than there is in one-on-one conversations.

4- Mass Communication

- Mass communication refers to any type of **media** that is used to communicate with mass audiences. Examples of mass media include *books, television, radios, films, computer technologies, magazines and newspapers*.
- Although mass communication does include certain computer technologies, it does NOT include technologies like **email** that are used to communicate one-on-one with someone.
- Mass communication is responsible for giving us views of events, issues and people from cultures that differ from ours. It enables us to learn what is going on in distant places in the world and lets us learn the viewpoints of people and cultures with whom we do not have direct contact

Forms/Types of Communicating

VERBAL

WRITTEN

NON-VERBAL

Verbal Communication

All forms of communication can be categorized as either verbal or nonverbal. Both verbal and nonverbal communication can be subdivided into either vocal or non-vocal.

Verbal communication involves using speech to exchange information with others. We usually communicate verbally in face-to-face conversations such as; meetings, interviews, conferences, speeches, phone calls e.t.c. Much of the communication that takes place between people is both verbal and non-verbal; that is, it is based on language and gestures.

Verbal communication of the vocal category includes spoken language, while non-vocal verbal communication involves written communication as well as communication, that is transmitted through sign language, finger spelling, Braille, or other similar alternatives to verbal language.

Paraverbal/paralinguistic/paralanguage features

- Paralinguistic or paralanguage features are the aspects of **spoken communication that do not involve words**. They add **emphasis** or **shades** of meaning to what people say. Paralinguistic features accompany verbal communication and are the vocal signals beyond the basic verbal message.
- Paralinguistic elements in a person's speech, convey meaning beyond the words and grammar used. Examples of paralinguistic features include **pitch**, **rate**, **quality** of voice and amplitude.
- Other forms of paralanguage can also include **laughter** or **imitative speech**. Prosody, which is the **rhythm**, **pattern**, **stress**, **rate**, **volume**, **inflection** and intonation of a person's speech, is also a form of paralanguage. People express meaning not just in what they say but in the way they say it.
- The paralinguistic features employed by a speaker provide hint to the meaning, communicate the speakers' attitudes and convey their emotion. Paralinguistic features also alert the listener as to how to interpret the message. Many of these paralinguistic features are culturally **coded** and inherent in verbal communication, often at a subconscious level.

Written Communication

Written communication involves any type of interaction that makes use of the written word. Communication is a key to any endeavor involving more than one person.

Communicating through writing is essential in the modern world and is becoming ever more so as we participate in what is now commonly called the information age. In fact, written communication is the most common form of business communication.

It is essential for small business owners and managers to develop effective written communication skills and to encourage the same in all employees. The information age has altered the ways in which we communicate and placed an increasing emphasis on written versus oral communications.

Non-Verbal

- Non-verbal communication is a type of communication that employs gestures and body language. The term "body language" is sometimes used to denote non-verbal communications.
- "Body Language" is the communication of personal feelings, emotions, attitudes, and thoughts through body-movements such as gestures, postures, facial expressions, touch, smell, walking styles and positions among others.
- These movements can be done either consciously or involuntarily; more often they "happen" subconsciously, and are accompanied, or not accompanied, by words.

First Impression Body Language DOs and DON'Ts While Standing

Non-Verbal

- There are basically three elements in any face-to-face communication. These three elements account differently for the meaning of the message:
 - Words account for 7%
 - Tone of voice account for 38%
 - Body language accounts for 55% of the message
-
- Our body language and tone of voice should be consistent with the words we use. This is only possible when we say what we mean to say and say it rightly. Otherwise, we can confuse people and reduce the prospect of getting our message across to be understood. Non-verbal communication can lead to misunderstandings, communication failure and even conflicts if the interlocutors are careless.

Non-verbal communication includes:

- (P)OSTURES & GESTURES
- (E)EYE CONTACT
- (O)RIENTATION
- (P)RESENTATION
- (L)OOKS
- (E)XPRESSIONS OF EMOTION

Body Language

- Body language and kinesics are based on the behavioral patterns of non-verbal communication. Body language can actually contradict verbal communications and reveal our inner feelings about any particular person or topic either intentionally or unintentionally.
- The way in which you fold your arms, cross your legs, sit, stand, walk, move your head, eyes, lips reveal what you may be thinking or feeling.
- For example, you may be sitting and conversing with a person; suddenly, he leans forward and with both arms clutches the chair. By doing so he nonverbally communicates to you his desire to end the meeting. Body language has shed new light on the dynamics of relationships.

Hands Gestures

Hands clenched in raised position

Hands clenched in middle position

Hands clenched in lower position

- Hands and arms are used by most of us to communicate our thoughts. People rub arms together, keep their arms closed, and clinch the fists. All these tell what the person has in his mind involuntary.
- It is a way that people non-verbally communicate positive expectations. Hands clenched together seems to be a confident gesture as some people who use it are often smiling and sound happy.
- However, if the hands are clenched too tightly, it is indicative of frustration or hostile attitude.

Eye Gestures/facial expression

- Facial expression, offers the most readily observable group of gestures. We focus our eyes on the face more often than on any other part of the body, and the expressions we see there have widely accepted meanings.

SURPRISE

ANGER

FEAR

DISGUST

HAPPINESS

CONTEMPT

- If a prospect's eyes are downcast and face turned away, you're being **shut out**, however, if the mouth move, he is probably considering your presentation.
- If his eyes engage yours for several seconds at a time with a slight, one-sided smile extending at least to nose level, he is weighing your proposal. It is only when you see '*eye to eye*' with another person that a real basis for communication can be established.

HOW TO READ BODY LANGUAGE

1. Raised eyebrows often signal discomfort.

2. If their voice goes up or down, they're most likely interested.

3. Eye contact shows interest — both positive and negative.

4. But if they look into your eyes for too long, they might be lying.

5. Crossed legs are usually a sign of resistance and low receptivity.

6. If they mirror your body language, the conversation is likely going well.

7. Look for a lack of crinkles around the eyes to detect a fake smile.

8. If they're laughing with you, they're probably into you.

9. Expansive, authoritative postures show leadership.

10. A shaking leg signals a shaky inner state.

Personal space refers to the **physical and emotional boundaries individuals set to feel comfortable** and safe in their interactions with others. This "buffer zone" varies significantly based on personal preferences, cultural backgrounds, and social contexts.

The concept was first introduced by anthropologist Edward T. Hall, who identified four distinct zones of personal space:

1. **Intimate Space (0 to 18 inches):** This zone is reserved for close relationships, such as family and romantic partners. It allows for physical touch and close emotional connections.
2. **Personal Space (1.5 to 4 feet):** This distance is typical for interactions with friends and acquaintances. It maintains a level of comfort while allowing for conversation without feeling invasive.
3. **Social Space (4 to 12 feet):** Common in formal settings, this zone is used for business meetings and casual interactions with strangers. It allows for communication while maintaining a respectful distance.
4. **Public Space (12 feet and beyond):** This zone is used in public settings, where individuals feel detached from others, such as during speeches or in crowded areas.

Other forms of nonverbal communication include touch, smell, distance.

What Is Your **Hidden Language** Saying?

- The number of people in a communication situation affects the use of non-verbal communication.
- The more the persons involved, the more complex the use and understanding of the non-verbal communication becomes.
- However, to decipher the non-verbal communication it is important to see, interpret and understand them holistically and in a context, while identifying the different types of personalities involved.
