

Questions bank funda Theory II

Part I: Multiple Choice Questions.

1. Which of the following best describes a medication?
 - a. A substance given only for the relief of pain
 - b. A substance administered for diagnosis, or treatment
 - c. A substance used only for curing diseases
 - d. A substance that can only be purchased over the counter
2. What does a prescription refer to?
 - a. A medication's chemical composition
 - b. A written direction for the preparation and administration of a drug
 - c. The trademark or brand name of a drug
 - d. The amount of dosage for a drug
3. Which of the following data collected by the nurse can be classified as objective data?
 - a. Pain in the abdomen
 - b. High blood pressure
 - c. High blood viscosity
 - d. Tingling sensation
 - e. Itching in the nose
4. Which one of these diagnoses would be of high priority?
 - a. Ineffective coping
 - b. Altered elimination needs
 - c. Risk for body image disturbance
 - d. Ineffective airway clearance.
 - e. activity intolerance
5. What is the percentage of NREM sleep during a typical night?
 - a. 50%
 - b. 75%
 - c. 90%
 - d. 100%
6. How long does REM sleep typically last in a sleep cycle?
 - a. 5 to 10 minutes
 - b. 10 to 20 minutes
 - c. 5 to 30 minutes
 - d. 30 to 60 minutes
7. Which of the following foods is most likely to improve bowel elimination?
 - a. Foods high in sugar and fat
 - b. Foods high in fiber, such as vegetables
 - c. Spicy foods, such as chili
 - d. Dairy products that are high in fat content

8. How does physical activity influence bowel elimination?

- a. It has no effect on bowel elimination
- b. Physical activity promotes peristalsis
- c. Physical activity increases the risk of diarrhea
- d. Physical activity can lead to constipation

9. What percentage of healthcare-acquired urinary tract infections (UTIs) is associated with the use of an indwelling urethral catheter?

- a. 50%
- b. 70%
- c. 80%
- d. 90%

10. Which of the following tests is typically used to confirm a diagnosis of urinary tract infection (UTI)?

- a. Chest X-ray
- b. Urine culture
- c. Blood glucose test
- d. ECG (Electrocardiogram)

11. Second spacing refers to the excess accumulation of fluid in which part of the body?

- a. Intracellular fluid
- b. Extracellular fluid
- c. Interstitial spaces (edema)
- d. Circulatory system

12. Which acid-base imbalance would the nurse suspect after assessing the following arterial blood gas values: pH, 7.30; PaCO₂, 36 mm Hg; HCO₃⁻, 14 mEq/L?

- a. Respiratory acidosis
- b. Respiratory alkalosis
- c. Metabolic acidosis
- d. Metabolic alkalosis

13. What is the primary function of carbohydrates in the body?

- a. To build and repair tissues.
- b. To provide energy
- c. To support immune function
- d. To protect vital organs

14. Which of the following types of fat is most commonly found in animal products and should be limited for heart health?

- a. Unsaturated fats
- b. Saturated fats
- c. Trans fats
- d. Omega-3 fatty acids

15. **How does self-concept influence an individual's actions?**

- a. It determines how one sees and treats others
- b. It decides the individual's intellectual abilities
- c. It affects only physical appearance
- d. It limits the individual's emotional capabilities

16. **Which of the following is NOT a dimension of self-concept?**

- a. Self-knowledge
- b. Self-expectation
- c. Social self
- d. Social influence

17. **Which of the following is an example of a situational stressor?**

- a. Marriage.
- b. Growing older.
- c. Going through puberty.
- d. Financial stability.

18. **Which of the following is a physical effect of stress?**

- a. Increased problem-solving ability.
- b. The ability to build stronger relationships.
- c. Stress can threaten an individual's physiological homeostasis.
- d. Enhanced social skills.

19. **What is grief?**

- a. The joy experienced after a positive event.
- b. A total response to the emotional experience related to loss.
- c. The denial of any loss experienced.
- d. The excitement related to a new beginning.

20. **What defines an actual loss?**

- a. A loss that is only felt by the individual but cannot be recognized by others.
- b. A loss that can be recognized by others.
- c. A loss that only occurs when an individual experiences grief.
- d. A loss related to the anticipation of an event.

Part II: True and False

21. Gender is the one of factor affecting medication action

- a. True
- b. False

22. Guidelines for writing nursing care plans be specific about expected timing of an intervention.

- a. True
- b. False

23. Insomnia refers to conditions where the affected individual obtains sufficient sleep at night but still cannot stay awake during the day.

- a. True
- b. False

24. Constipation a prolonged retention or an accumulation of fecal material which forms a hardened mass in the rectum, it may be of sufficient size to prevent the passage of normal stools.

- a. True
- b. False

25. Men are more susceptible to Urinary Tract Infections than women

- a. True
- b. False

26. Third Spacing describes the excess accumulation of fluid in the interstitial spaces

- a. True
- b. False

27. Protein is broken down into glucose (sugar) for energy by cells, tissues, and organs

- a. True
- b. False

28. cognitive aspects of body image include the sensations of the body, such as pain, pleasure, fatigue, and physical movement

- a. True
- b. False

29. Coping Is the cognitive and behavioral effort to manage specific external and/or internal demands that are appraised as taxing or exceeding the resources of the person.

- a. True
- b. False

30. Anticipatory grief is experienced in advance of the feeling such as the wife who grieves before her ailing husband dies

- a. True
- b. False

Part III: Short answer questions

31. List Routes of Administration of medication

➤ **Oral Routes**

- **Sublingual Administration**
- **Buccal Administration**

➤ **Parenteral Routes**

- Intradermal (ID): Injection into the dermis just under the epidermis
- Subcutaneous: Injection into tissues just below the dermis of the skin
- Intramuscular (IM): Injection into a muscle
- Intravenous (IV): Injection into a vein

➤ **Topical Administration**

➤ **Inhalation Route**

32. List fourteen “Rights” of Medication Administration

1. Right medication
2. Right dose
3. Right time
4. Right route
5. Right client
6. Right client education
7. Right documentation
8. Right to refuse
9. Right assessment
10. Right evaluation
11. Right Reason
12. Right Disposal
13. Right Response

14. Right Storage

33. What are the characteristics of the nursing process?

Answer/The nursing process has seven distinct characteristics:

- a. Within the legal scope of nursing
- b. Based on knowledge
- c. Planned
- d. Client centered
- e. Goal directed
- f. Prioritized
- g. Dynamic

34. List the 5 steps of the nursing process?

Answer/

1. Assessment-
2. Diagnosis-
3. Planning-
4. Implementation-
5. Evaluation

35. List Three common types of sleep apnea

1. Obstructive apnea
2. Central apnea
3. Mixed apnea.

36. List the Factors Affecting Sleep

1. Illness
2. Environment
3. Lifestyle
4. Emotional Stress
5. Stimulants and Alcohol
6. Diet
7. Smoking
8. Motivation
9. Medications

37. Nursing management of constipation

- ♦ Provide adequate fluid intake 500 – 2000 cc/day.
- ♦ Provide a well-balanced diet with enough roughage from fruits and vegetables and vitamins.
- ♦ Encourage regularity of time for defecation and prompt response to the desire of defecation.
- ♦ Encourage regularity of meal's time

- ♦ Provide adequate time for complete evacuation.
- ♦ Provide privacy for patients to promote relaxation.
- ♦ Provide posture (position) as close to normal as possible.
- ♦ Provide physical exercises especially for abdominal muscles.
- ♦ Consider the patient's habit in relation to defecation.

38. Causes fecal impaction

- ♦ Prolonged constipation and poor habits of defecation.
- ♦ Prolonged bed rest, vary in paralyzed or unconscious patients.
- ♦ Prolonged use of anti-diarrheas drugs.
- ♦ Following the administration of Barium for x ray examination of the G.I.T.

39. Signs and symptoms of urinary tract infection:

- Patients with lower urinary tract infections have pain or burning during urination (dysuria) as urine flows over inflamed tissues.
- Fever, chills, nausea, vomiting, and malaise develop as an infection worsens.
- An irritated bladder (cystitis) causes a frequent and urgent sensation of the need to void.
- Irritation to bladder and urethral mucosa results in blood-tinged urine (hematuria).
- The urine appears concentrated and cloudy because of the presence of white blood cells or bacteria.
- If infection spreads to the upper urinary tract (kidneys) causing pyelonephritis, flank pain, tenderness, fever, and chills are common.

40. Urinary retention care includes:

1. Scheduled toileting.
2. Credé's method or manual compression of the bladder walls with each attempted void may be used. Instruct the patient to place both hands flat on the abdomen below the umbilicus and above the symphysis pubis with the fingers pointed down toward the bladder dome. Have him or her compress the hands downward against the walls of the bladder while tightening the perineum, contracting the abdominal wall, and holding the breath. The maneuver promotes bladder emptying by relaxing the urethral sphincter.

50. Enumerate factors that influence on the amount body of fluid content:

- Age
- Lean body mass
- Sex or gender

- Environment
- Diet
- Stress
- Illness

51. List of Three elements for Assessing fluid balance

1. Clinical assessment
2. Review of fluid balance charts
3. Review of blood chemistry.

52. Enumerate Common Dietary Assessment Tools

1. 24-Hour Dietary Recall
2. Food Diary (Food Record)
3. 4. Diet History Interview
4. Food Frequency Questionnaire (FFQ)
5. Nutrient Analysis Software
6. Anthropometric Measurements
7. Biochemical Indicators
8. Clinical Observation

53. List importance of Macronutrients:

- **Energy Supply:** Carbohydrates and fats provide energy, while proteins provide energy when necessary.
- **Body Repair and Maintenance:** Proteins help in tissue repair and muscle building.
- **Growth and Development:** Essential for cell growth, brain development, and hormonal functions.
- **Metabolism Regulation:** All three macronutrients play a role in regulating metabolic processes in the body.

54. List four dimensions of self-concept:

- **Self-knowledge:** insight into one's own abilities, nature, and limitations
- **Self-expectation:** what one expects of oneself; may be realistic or unrealistic expectations

- **Social self:** how one is perceived by others and society
- **Social evaluation:** the appraisal of oneself in relationship to others, events, or situations.

55. Enumerate factors that affect self-concept

- Stage of development
- Family and culture
- Stressors
- Resources
- History of success and failure
- Illness.

56. Enumerate effects of stress

- ♦ **Physical effect:** stress can threaten an individual's physiologic homeostasis.
- ♦ **Emotional effect:** stress can produce negative or non constructive feelings about the self.
- ♦ **Intellectual effect:** stress can influence an individual's perceptual and problem-solving abilities.
- ♦ **Social effect:** stress can alter an individual's relationships with others.
- ♦ **Spiritual effect:** stress can challenge one's beliefs and values. Many health conditions have been linked to stress.

57. List Three stages of the general adaptation syndrome (GAS) GAS and the local adaptation syndrome LAS

- a. Alarm reaction
- b. Resistance
- c. Exhaustion

58. Enumerate (3) of Signs of Impending clinical death

1. Loss of muscle tone
2. Slowing of the circulation
3. Changes in respiration
4. Sensory impairment

59. Name (4) factors that influencing the Loss and grief responses

- Age
- Significance of the Loss
- Culture

- Spiritual Beliefs
- Gender
- Socioeconomic Status
- Support system
