2

Shift Nursing Reports

3

- ❑ It is an **essential** document **utilized** by nursing staff to facilitate **seamless** communication **between** shifts.
- ❑ It serves as a **comprehensive** summary of patient **status**, **ongoing** care plans, **recent** interventions, and any **critical** observations that **need** attention from **incoming** nurses.
- ❑ The primary goal of this report is to **ensure**:
 - ✓ Continuity of care,
 - ✓ minimize errors, and
 - ✓ promote patient safety..

Shift Nursing Reports

4

- ❑ As healthcare **environments** become increasingly **complex**, the **importance** of an organized and detailed shift report sheet **cannot** be overstated.
- ❑ It acts as a **bridge** that:
 - ✓ Connects **outgoing** and **incoming** nursing teams,
 - ✓ **Ensuring** that vital information is **accurately** transferred, and
 - ✓ Patient care **remains** uninterrupted and of **high** quality..

The Importance of a Nursing Shift Report

5

- ✓ Promotes Continuity of Care.
- ✓ Enhances Patient Safety.
- ✓ Facilitates Communication Among Healthcare Team Members.
- ✓ Legal and Documentation Purposes..

Nursing Shift Report (Case Study)

13

Nurse **Sarah Ahmed**, a registered nurse working the **07:00 to 19:00** day shift on **22 November 2025**, was assigned to care for **Hassan Mohamed**, a 57-year-old male admitted to **Room 214, Bed B**. Hassan had been admitted the previous evening with a primary diagnosis of **community-acquired pneumonia**, complicated by **acute hypoxia**. His **allergy to penicillin** had been noted in his chart, as well as his **Full Code** status.

When Sarah began her shift, she assessed Hassan's condition. His **vital signs** showed a **temperature of 37.8°C**, **heart rate of 102 bpm**, **respiratory rate of 22/min**, **blood pressure of 126/78 mmHg**, and **oxygen saturation of 92%** while receiving **2 L/min of oxygen via nasal cannula**. Hassan reported **mild chest pain (3/10)** that worsened with coughing. He was **alert and oriented**, cooperative, and able to ambulate with help, though he fatigued quickly.

Nursing Shift Report (Case Study)

14

Throughout the shift, Sarah administered the patient's prescribed medications, including **IV Ceftriaxone at 08:00, IV Azithromycin at 10:00, oral Paracetamol at 11:45, and two Salbutamol nebulizer treatments.** She also performed **chest physiotherapy twice** and encouraged the use of the **incentive spirometer** every hour. By midday, Hassan showed **increased productive coughing with yellow sputum** and experienced **mild shortness of breath on exertion**, prompting Sarah to monitor him closely. She **increased his oxygen flow**, promoted fluid intake, and continued regular assessments for fever or worsening respiratory distress.

The care plan for the day included a **scheduled chest X-ray at 17:00** and a **pending sputum culture.** Hassan was placed on a **soft, high-protein diet** and advised to drink over **2 liters of water daily.** He was restricted from strenuous activity and instructed to ambulate only with assistance. Hassan expressed his goals for the day: to breathe more comfortably, reduce his coughing, and avoid another fever spike.

Nursing Shift Report (Case Study)

15

Sarah inspected Hassan's **IV cannula in his left forearm**, which remained clean and patent with no signs of redness or swelling. His ongoing IV therapy included **normal saline at 75 mL/hr**, along with the scheduled IV antibiotics. He also received **Enoxaparin 40 mg subcutaneously** for DVT prevention.

During the shift, Hassan required **continuous pulse oximetry, incentive spirometer use**, and occasional nebulizer treatments. He had **no wounds**, and his respiratory support remained at **2 L/min** of oxygen.

Discharge planning discussions indicated that Hassan might be medically stable for discharge between **24–25 November**, depending on improvements in oxygenation. His wife visited at **13:00**, and Sarah updated her regarding his progress. No financial or psychosocial concerns were identified, so no social work intervention was needed.

Nursing Shift Report (Case Study)

16

At the end of her shift, Sarah prepared the handover for the incoming nurse, **Ali Mostafa**. She highlighted important alerts such as monitoring for fever, reviewing the sputum culture and upcoming chest X-ray results, and ensuring that his oxygen saturation stayed above 92%. Pending tasks included assessment of the IV site later in the evening and administering nebulizer treatments as needed. Sarah signed off her report at **18:45**, completing her responsibilities for the day and transferring care safely to Ali.

Nursing Shift Report (Case Study)

17

Nurse **Sarah Ahmed**, a registered nurse working the **07:00 to 19:00** day shift on **22 November 2025**, was assigned to care for **Hassan Mohamed**, a 57-year-old male admitted to **Room 214, Bed B**. Hassan had been admitted the previous evening with a primary diagnosis of **community-acquired pneumonia**, complicated by **acute hypoxia**. His **allergy to penicillin** had been noted in his chart, as well as his **Full Code** status.

1. Basic Information			
Date	22 November 2025		
Shift Start Time	07:00	Shift End Time	19:00
Nurse Name	Sarah Ahmed, RN		
Patient Room / Bed Number	Room 214 / Bed B		

Components of a Nursing Shift Report

18

Nurse **Sarah Ahmed**, a registered nurse working the **07:00 to 19:00** day shift on **22 November 2025**, was assigned to care for **Hassan Mohamed**, a 57-year-old male admitted to **Room 214, Bed B**. Hassan had been admitted the previous evening with a primary diagnosis of **community-acquired pneumonia**, complicated by **acute hypoxia**. His **allergy to penicillin** had been noted in his chart, as well as his **Full Code** status.

2. Patient Information	
Patient Name	Hassan Mohamed
Patient ID Number	458721
Primary Diagnosis	Community-acquired pneumonia with acute hypoxia
Allergies	Penicillin (rash and shortness of breath)
Code Status	Full Code

Components of a Nursing Shift Report

19

When Sarah began her shift, she assessed Hassan's condition. His **vital signs** showed a **temperature of 37.8°C**, **heart rate of 102 bpm**, **respiratory rate of 22/min**, **blood pressure of 126/78 mmHg**, and **oxygen saturation of 92%** while receiving **2 L/min of oxygen via nasal cannula**. Hassan reported **mild chest pain (3/10)** that worsened with coughing. He was **alert and oriented**, **cooperative**, and able to **ambulate with help**, though he **fatigued quickly**.

3. Patient Status Overview	
Vital Signs	☐ Temp 37.8°C ☐ HR 102 bpm ☐ RR 22/min ☐ BP 126/78 mmHg ☐ SpO ₂ 92% on 2 L/min nasal cannula
Pain Level	3/10 (mild chest discomfort when coughing)
Mental Status	Alert and oriented × 3, cooperative
Mobility	Ambulates with assistance; fatigues easily

Components of a Nursing Shift Report

20

Throughout the shift, Sarah administered the patient's prescribed medications, including **IV Ceftriaxone 1g at 08:00, IV Azithromycin 500mg at 10:00, oral Paracetamol 1g at 11:45**, and **two Salbutamol nebulizer treatments at 9:30 and 15:00**. She also performed **chest physiotherapy twice** and encouraged the use of the **incentive spirometer every hour**. By midday, Hassan showed **increased productive coughing with yellow sputum** and experienced **mild shortness of breath on exertion**, prompting Sarah to monitor him closely. She **increased his oxygen flow**, promoted **fluid intake**, and **continued regular assessments for fever or worsening respiratory distress**.

4. Recent Changes and Events	
Medications Administered	☐ IV Ceftriaxone 1 g at 08:00 ☐ IV Azithromycin 500 mg at 10:00 ☐ Paracetamol 1 g PO at 11:45 ☐ Salbutamol nebulizer at 09:30 and 15:00
Treatments Performed	☐ Chest physiotherapy × 2 sessions ☐ Incentive spirometer encouraged (10 breaths/hour)
New Symptoms / Complications	☐ Increased productive cough with yellow sputum ☐ Mild shortness of breath on exertion
Interventions	☐ Increased O₂ to 2 L/min ☐ Encouraged fluids ☐ Monitored for fever and respiratory distress

Components of a Nursing Shift Report

21

The care plan for the day included a **scheduled chest X-ray at 17:00** and a **pending sputum culture**. Hassan was placed on a **soft, high-protein diet** and advised to drink **over 2 liters of water daily**. He was **restricted** from **strenuous activity** and instructed to **ambulate only with assistance**. Hassan expressed his goals for the day: to **breathe more comfortably**, **reduce his coughing**, and **avoid another fever spike**.

5. Care Plan Updates	
Scheduled Procedures	☐ Chest X-ray scheduled for 17:00 ☐ Sputum culture pending
Diet / Nutrition	☐ Soft diet, high protein recommended ☐ Oral fluids encouraged (>2 L/day)
Activity Restrictions	☐ Avoid exertion ☐ Ambulate with assistance only
Patient Goals	☐ Improve breathing ☐ Maintain oxygen saturation >94% ☐ Reduce fever

Components of a Nursing Shift Report

22

Sarah inspected Hassan's **IV cannula in his left forearm**, which remained **clean and patent with no signs of redness or swelling**. His ongoing IV therapy included **normal saline at 75 mL/hr**, along with the **scheduled IV antibiotics**. He also received **Enoxaparin 40 mg subcutaneously** for DVT prevention.

6. IV Access and Medications	
IV Sit and Status	Left forearm 20G cannula; clean, dry, intact; no redness
Current IV Medications	☐ Maintenance fluids: Normal saline at 75 mL/hr ☐ IV antibiotics as listed above
Scheduled Medications	☐ Ceftriaxone q24h ☐ Azithromycin daily ☐ Paracetamol PRN fever ☐ Enoxaparin 40 mg SC daily (DVT prophylaxis)

Components of a Nursing Shift Report

23

During the shift, Hassan required **continuous pulse oximetry**, **incentive spirometer use**, and **occasional nebulizer treatments**. He had **no wounds**, and his **respiratory support remained at 2 L/min** of oxygen.

7. Patient Care Summary	
Wound Care	No wounds noted
Respiratory Support	☐ 2 L/min nasal cannula ☐ Nebulization PRN
Special Equipment	☐ Pulse oximeter continuous monitoring ☐ Incentive spirometer
Other Treatments	☐ Chest physiotherapy ☐ Hydration support

Components of a Nursing Shift Report

24

Discharge planning discussions indicated that Hassan might be medically stable for discharge between **24–25 November**, depending on improvements in oxygenation. His wife visited at **13:00**, and Sarah updated her regarding his progress. No financial or psychosocial concerns were identified, so no social work intervention was needed.

8. Discharge Planning and Social Work	
Estimated Discharge Date	24–25 November 2025 (depending on oxygen requirement)
Follow-Up Appointments	☐ Pulmonary clinic in 7 days ☐ Primary care follow-up in 2 weeks
Family / Visitor Updates	Wife updated at bedside at 13:00
Social Work / Case Management	No financial or home care issues identified

Components of a Nursing Shift Report

25

At the end of her shift, Sarah prepared the handover for the incoming nurse, **Ali Mostafa**. She highlighted important alerts such as **monitoring for fever**, **reviewing the sputum culture** and **upcoming chest X-ray results**, and **ensuring that his oxygen saturation stayed above 92%**. Pending tasks included **assessment of the IV site later in the evening** and **administering nebulizer treatments** as needed.

9. Handover	
Handover To (Incoming Nurse)	Ali Mostafa, RN
Important Alerts	□ Watch for increasing fever □ Monitor sputum results □ Maintain O₂ saturation >92%
Pending Tasks	□ Review chest X-ray when completed □ Continue nebulizer PRN □ Assess IV site at 21:00

Components of a Nursing Shift Report

26

Sarah signed off her report at **18:45**, completing her responsibilities for the day and transferring care safely to **Ali**.

10. Sign-Off	
Outgoing Nurse Signature	Sarah Ahmed, RN
Incoming Nurse Signature	Ali Mostafa, RN
Date and Time of Report Completion	22 November 2025 — 18:45

Quiz # 2

27

Exam Date:

Group (2): Monday 1/12/2025.

Group (1): Tuesday 2/12/2025.

Group (3): Wednesday 3/12/2025.

Topics:
