

Lecture 2: Technical Writing

1. Define technical communication and its primary purpose.

Answer:

Technical communication is the process of **presenting technical information clearly and effectively** to specific audiences.

Its main purpose is to **help people understand information and take action or make decisions**.

2. Explain the six factors of accessibility in technical documents.

Answer:

- **Accuracy:** Information is correct and error-free.
 - **Clarity:** Meaning is clear with no ambiguity.
 - **Completeness:** All required information is included.
 - **Diction:** Appropriate and suitable language is used.
 - **Organization:** Ideas are arranged logically.
 - **Visual effectiveness:** Proper layout, design, and graphics.
-

3. Describe the five stages of the technical writing process.

Answer:

1. **Planning and researching** – gathering information.
 2. **Organizing and drafting** – arranging ideas and writing the first draft.
 3. **Improving style** – making writing clear and effective.
 4. **Designing the document** – using visuals and layout.
 5. **Revising and editing** – reviewing content and correcting errors.
-

4. Discuss the rhetorical situation and its main elements.

Answer:

The rhetorical situation explains **why and how a document is written**.

Its elements include:

- **Subject** – the topic.
 - **Purpose** – the goal of the document.
 - **Readers** – the target audience.
 - **Context** – where and when the document is used.
-

5. What are the four levels of revision in technical writing?

Answer:

- **Revising:** Reviewing content and purpose.
 - **Substantive editing:** Improving organization and design.
 - **Copyediting:** Correcting grammar and sentence structure.
 - **Proofreading:** Final check for spelling and punctuation.
-

Lecture 3: Nurses Report Sheets

1. What is a nursing report sheet and why is it important?

Answer:

A nursing report sheet is a document used to record **patient data and care information**. It is important because it ensures **effective communication and continuity of care** between shifts.

2. List five benefits of nursing report sheets.

Answer:

- Improves patient care.
 - Enhances patient safety.
 - Reduces medical errors.
 - Saves time and increases efficiency.
 - Can be customized for departments.
-

3. Describe the main components of a patient report sheet.

Answer:

- Patient identification data.
 - Diagnosis and medical history.
 - Medications and treatments.
 - Vital signs and assessments.
 - Intake and output records.
 - Planned procedures and care plan.
-

4. Give four tips for completing a report sheet effectively.

Answer:

- Use approved abbreviations.
 - Focus on critical information.
 - Update data during the shift.
 - Review accuracy before handover.
-

Lecture 4: Practical Application

1. How are medical history and allergies documented in the Sarah Johnson case?

Answer:

Her history includes **asthma, seasonal allergies, and previous surgery.**

Her **penicillin allergy** is clearly documented to prevent medication errors.

2. What are the care priorities for a patient with Influenza B?

Answer:

- Apply droplet isolation precautions.
 - Encourage adequate fluid intake.
 - Monitor body temperature regularly.
-

3. Explain the relay runner's baton analogy in nursing reports.

Answer:

The report sheet is like a baton passed between nurses.

Good handover ensures smooth care, while poor handover risks patient safety.

Lecture 5: Records

1. Define records and state their importance in healthcare.

Answer:

Records are **written documents that document actions and events.**

In healthcare, they provide **legal evidence, continuity of care, and patient safety.**

2. List the characteristics of good records.

Answer:

Good records are **accurate, complete, updated, organized, confidential, and objective.**

3. Compare alphabetical and numerical filing systems.

Answer:

- **Alphabetical filing:** Arranged by names and easy to use.
 - **Numerical filing:** Arranged by numbers and useful for large systems.
-

4. Explain the black box analogy of records.

Answer:

Like an airplane's black box, records **store complete and permanent information** for safety and legal accountability.

Lecture 6: The Nursing Process

1. Define the nursing process and its characteristics.

Answer:

The nursing process is a **systematic method for planning patient care.**

It is **cyclic, dynamic, patient-centered, and collaborative.**

2. Differentiate between subjective and objective data.

Answer:

- **Subjective data:** Patient-reported symptoms (e.g., pain).
 - **Objective data:** Measurable signs (e.g., temperature).
-

3. Explain the PES format.

Answer:

- **P:** Problem
 - **E:** Etiology
 - **S:** Signs and symptoms
Used to write clear nursing diagnoses.
-

4. Describe the four types of nursing assessment.

Answer:

- Initial assessment
 - Problem-focused assessment
 - Emergency assessment
 - Time-lapsed assessment
-

Lecture 7: Nursing Reports

1. Identify the three main types of nursing reports.

Answer:

- Shift report
 - Admission report
 - Discharge report
-

2. What are the goals of a shift report?

Answer:

- Ensure continuity of care.
 - Reduce errors.
 - Transfer accurate information.
 - Provide legal documentation.
-

3. List components of a shift report.

Answer:

Patient information, current status, recent changes, care plan, medications, IV access, discharge planning, and handover details.

Lecture 8: SBAR Technique

1. What does SBAR stand for and why is it used?

Answer:

SBAR stands for **Situation, Background, Assessment, Recommendation**.

It is used to **communicate critical information clearly and quickly**.

2. How does SBAR improve patient safety?

Answer:

It reduces miscommunication, organizes information, and prevents vague messages.

3. Describe the Recommendation step.

Answer:

It states **what action is needed**, the time frame, and confirms orders for accuracy.

4. Explain the mechanic analogy of SBAR.

Answer:

- Situation: current problem
- Background: history
- Assessment: suspected cause

- Recommendation: required action
-

1. Plain Style vs. Persuasive Style

Plain Style	Persuasive Style
Clear and direct writing	Aims to convince the reader
Focuses on facts	Uses logic and emotion
Gives information only	Motivates action or agreement

2. Subjective Data vs. Objective Data

Subjective Data	Objective Data
Reported by the patient	Observed or measured
Symptoms	Signs
Example: pain, itching	Example: temperature, BP

3. Nursing Diagnosis vs. Medical Diagnosis

Nursing Diagnosis	Medical Diagnosis
Human response to illness	Disease or condition
Can change over time	Usually remains the same
Focuses on patient needs	Focuses on pathology

4. Filing Systems Comparison

Alphabetical	Numerical	Geographical
By names	By numbers	By location
Easy and familiar	Accurate for large systems	Useful for multiple sites
Commonly used	More organized	Location-based

7. Primary vs. Secondary Data Sources

Primary Source	Secondary Source
From the patient	From others or records
Direct information	Indirect information
Most reliable	Used when patient can't respond

8. Types of Nursing Interventions

Independent	Dependent	Collaborative
Nurse-initiated	Doctor-ordered	Team-based
No order needed	Requires order	Shared responsibility
