

Risk management and error reduction in healthcare

By

Dr/Nehal Mahmoud

International patient safety goals (IPSGs):

Identify patients correctly.

Improve staff communication.

Use medicine safely.

Use alarms safely.

Preventing infection

Identify patient safety risks.

Improve health care quality.

Prevent mistakes in surgery.

Concepts of Risk and Error in Healthcare

Common Patient Safety Risks in Healthcare Settings

1. Medication Errors: Wrong medication, dose, or administration route.

2. Hospital-Acquired Infections (HAIs): Infections acquired during hospital stay.

3. Falls and Injuries: Patient falls, slips, or trips
. انزلاقات أو تعثرات .

4. Surgical Site Infections (SSIs): Infections at surgical sites.

5. Venous Thromboembolism (VTE): Blood clots in veins.

Common Patient Safety Risks in Healthcare Settings:

6. Pressure Ulcers: Skin damage due to prolonged pressure.

7. Adverse Events: Unintended harm or injury.

8. Diagnostic Errors: Incorrect or delayed diagnosis.

9. Communication Breakdowns: Inadequate or unclear communication.

10. Equipment Failure: Malfunctioning medical equipment.

Causes of Patient Safety Risks

1. **Human Factors:** Staff fatigue, stress, or lack of training.
2. **Systemic Issues:** Inadequate policies, procedures, or resources.
3. **Environmental Factors:** Poor lighting, noise, or ergonomic design.
4. **Technological Failures:** Equipment malfunction or software glitches.
5. **Consequences:** Patient harm, injury, or death; increased healthcare costs; decreased patient satisfaction.

Management: is the coordination and administration of tasks to achieve a goal, through the application of available resources.

Management is a process of getting work done through other people.

Benefits of Effective Risk Management

1

1. Improved patient safety: Reduce adverse events and near misses.

2

2. Reduced liability: Minimize risk of lawsuits and financial losses.

3

3. Enhanced reputation: Demonstrate commitment to patient safety and quality care.

Levels of Management:

- The term “**Levels of Management**” refers to a line of **demarcation** ترسيم الحدود between various **managerial positions** in an **organization**. The level of management determines a chain of command, the amount of authority & status enjoyed by any managerial position. The levels of management can be classified in **three broad categories**:

Levels of Management

- Top level / Administrative level
- Middle level / Executory تنفيذية
- Low level / Supervisory / Operative / First-line managers

1. Top Level of Management

- It consists of a board of directors, chief executive or managing director. They are sources of authority, and it manages goals and policies, they spend more time on planning.
- 

The role of the top management can be summarized as follows:

- Top management **lays down the objectives and broad policies** of the enterprise.
- It issues necessary instructions for **preparation of department budgets, procedures, schedules etc.**
- It prepares **strategic plans & policies for the organization.**
- It **appoints the executive for middle level** i.e. departmental managers.
- It controls & coordinates the **activities of all the departments.**
- It is also responsible for **maintaining contact with the outside world.**
- It provides **guidance and direction.**

2. Middle Level of Management

The branch managers and departmental managers constitute middle level.

They are responsible for the top management for the functioning of their department. In small organizations, there is only one layer of middle level management but in big organizations, there may be senior and junior middle level management.

Their role can be emphasized as

- They execute the plans of the organization in accordance with the policies and directives of the top management.
- They participate in employment & training in lower-level management.
- They interpret and explain policies from top level management to lower level.
- They are responsible for coordinating the activities within the division or department.
- It also sends important reports and other important data to top level management.
- They are also responsible for inspiring lower-level managers towards better performance

3.Lower Level of Management

- Lower level is also known as supervisory / operative level of management. It consists of supervisors, foreman **رئيس العمال**, section officers **المشرف**, **ضباط الأقسام**, superintendent, they are concerned with direction and controlling function of management.

Their role includes:

- **Assigning jobs and tasks to various workers.**
- They guide and instruct workers for **day-to-day activities.**
- They are responsible for the **quality as well as quantity of production.**
- They are responsible for **maintaining good relations** in the organization.
- They **supervise, guide the sub-ordinates** and help to solve the complaints of the workers.
- They are responsible for **providing training & motivation for the workers.**
- They are the **image builders** of the organization because they are in **direct contact with the workers.**

Responsibilities of a Manager in risk management

- **To fulfill this role manager must possess:**
 - **Budgeting.**
 - **Planning**
 - **Management theories**
 - **Organizational structures**
 - **Communication skills**
 - **Rules and regulations**
 - **Staff development**
 - **Staff appraisal** توصية

Strategies for Managing Risk and Error in Healthcare Settings

1. Identify potential risks(assessment):

Conduct risk assessments to identify potential hazards.

2. Develop policies, plans and procedures:

Establish clear policies and procedures to mitigate risks.

3. Provide educational sessions and training:

Educate staff on risk management and error reduction strategies.

4. Encourage reporting:

Encourage staff to report near misses and adverse events.

5. Conduct analysis (root cause analyses):

Investigate adverse events to identify underlying causes.

6. Implement corrective actions:

Implement changes to prevent similar adverse events.

The risk management tools.

1. **Failure Mode and Effects Analysis (FMEA):** Identifies potential failures and their effects.
2. **Root Cause Analysis (RCA):** Investigates adverse events to identify underlying causes.
3. **SWOT Analysis:** Identifies strengths, weaknesses, opportunities, and threats.
4. **Decision Trees:** Visualize decision-making processes to identify potential risks.
5. **Fishbone Diagrams (Ishikawa Diagrams):** Identify potential causes of problems.
6. **Pareto Analysis:** Identify the most common problems or causes of problems.
7. **Risk Matrix:** Evaluate and prioritize risks based on their likelihood and impact. تحديد أولويات المخاطر بناءً على احتمالية حدوثها وتأثيرها.

Challenges and Opportunities

1

1. **Limited resources:**

Allocate resources effectively to support risk management efforts.

2

2. **Staff engagement:**

Encourage staff participation in risk management activities.

3

3. **Changing healthcare landscape:** المشهد المتغير للرعاية الصحية

Stay up-to-date with regulatory requirements and industry best practices.

4

4. **Technological advancements:**

Leverage technology to support risk management efforts.
