3- Rheumatoid arthritis

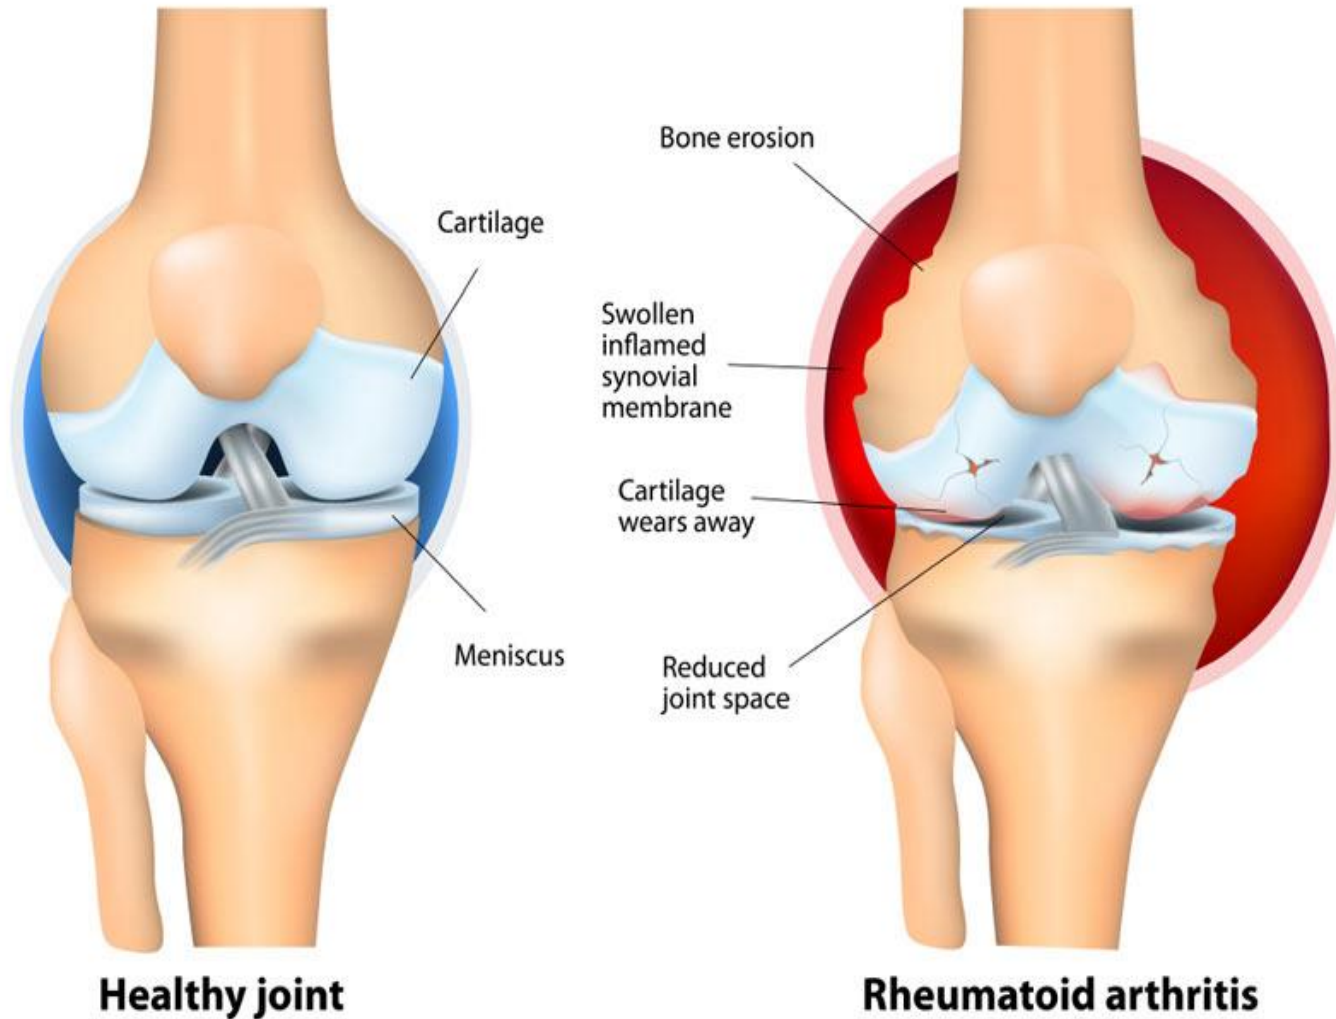

- ◉ Definition
- ◉ Causes
- ◉ Manifestations
- ◉ Diagnosis
- ◉ Managements

Definition:

It is an **inflammatory** disease of the **joints**, originates in the **synovium**, a soft tissue membrane that lines and protects joints.

The joints become **swollen**, **stiff** and **painful**. This can happen in one or several joints particularly fingers, wrists, knees and ankles

RHEUMATOID ARTHRITIS

Causes of Rheumatoid Arthritis

Smoking

Age

40-60 yrs

Immune system
issues

Obesity

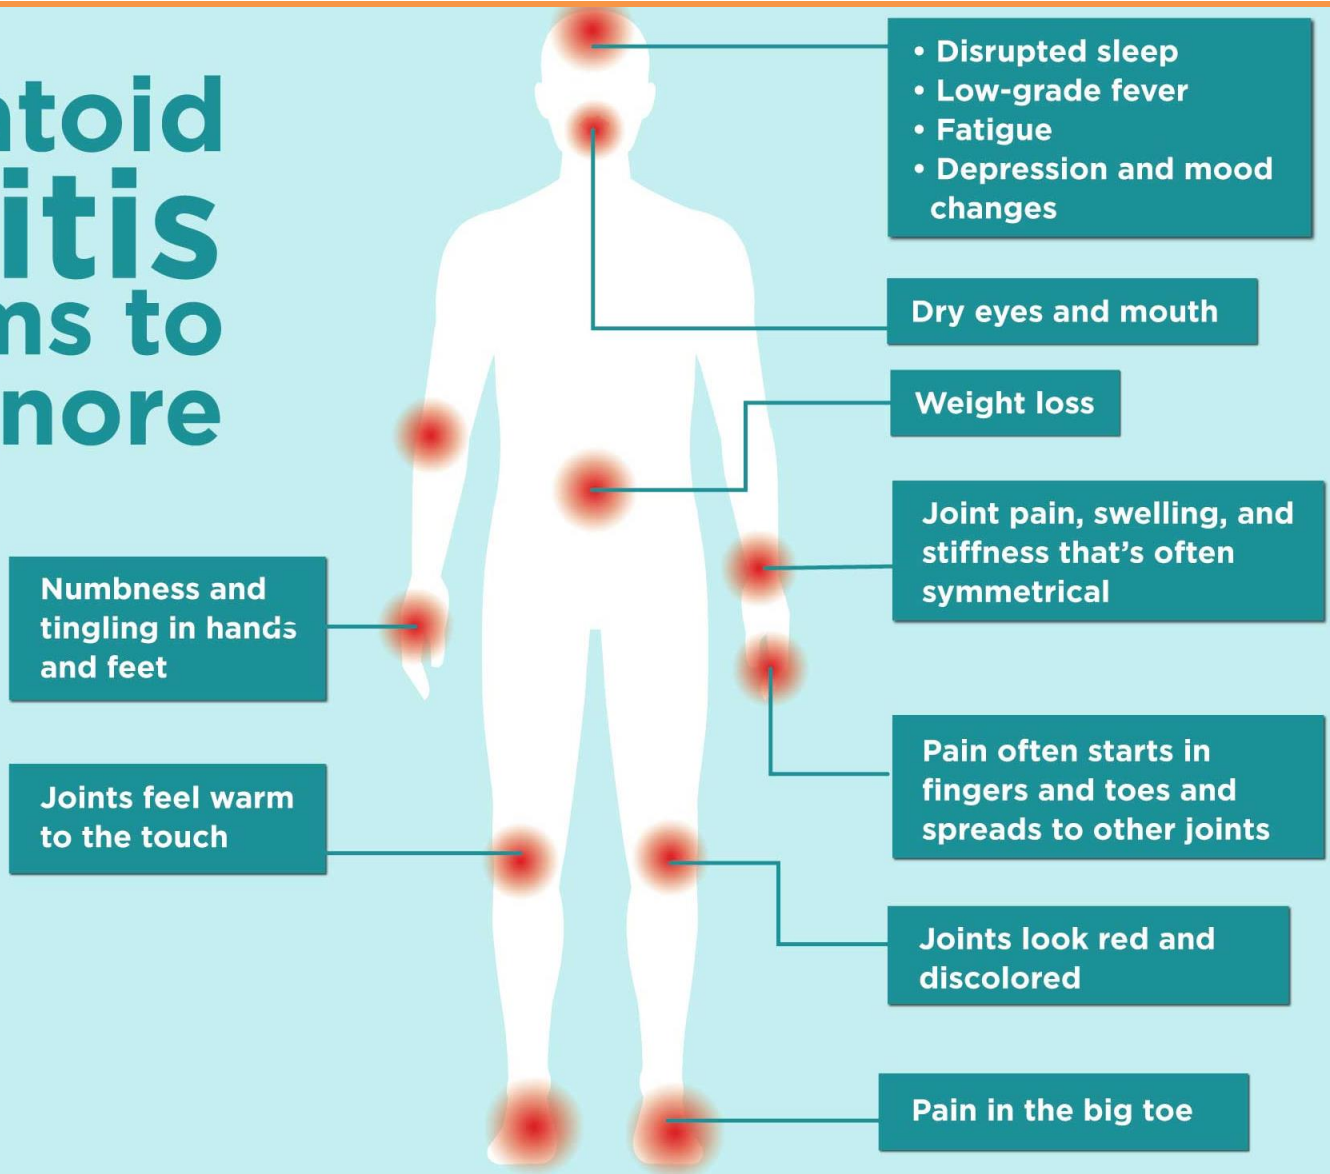

Genetics

Manifestations

Rheumatoid Arthritis symptoms to **never** ignore

Symptoms

Joint pain, tenderness, swelling, or stiffness

Morning stiffness lasting an hour or more

Unsteadiness when walking

Loss of function and mobility

Joint deformity

Fatigue

Low-grade fever

Weight loss

Anemia

Diagnostic assessment: -

- ❖ Presence of **manifestations**.
- ❖ **Rheumatoid Factor** (RF) found in 80% of patients.
- ❖ C-reactive protein (CRP) 
- ❖ ESR 
- ❖ **Decreased** RBC and Cr 

Management

Nursing Interventions :

- Pain relief measures
- Relief of fatigue
- Increasing mobility
- Monitoring for potential complications
- Increase knowledge of disease
- Promoting self-care

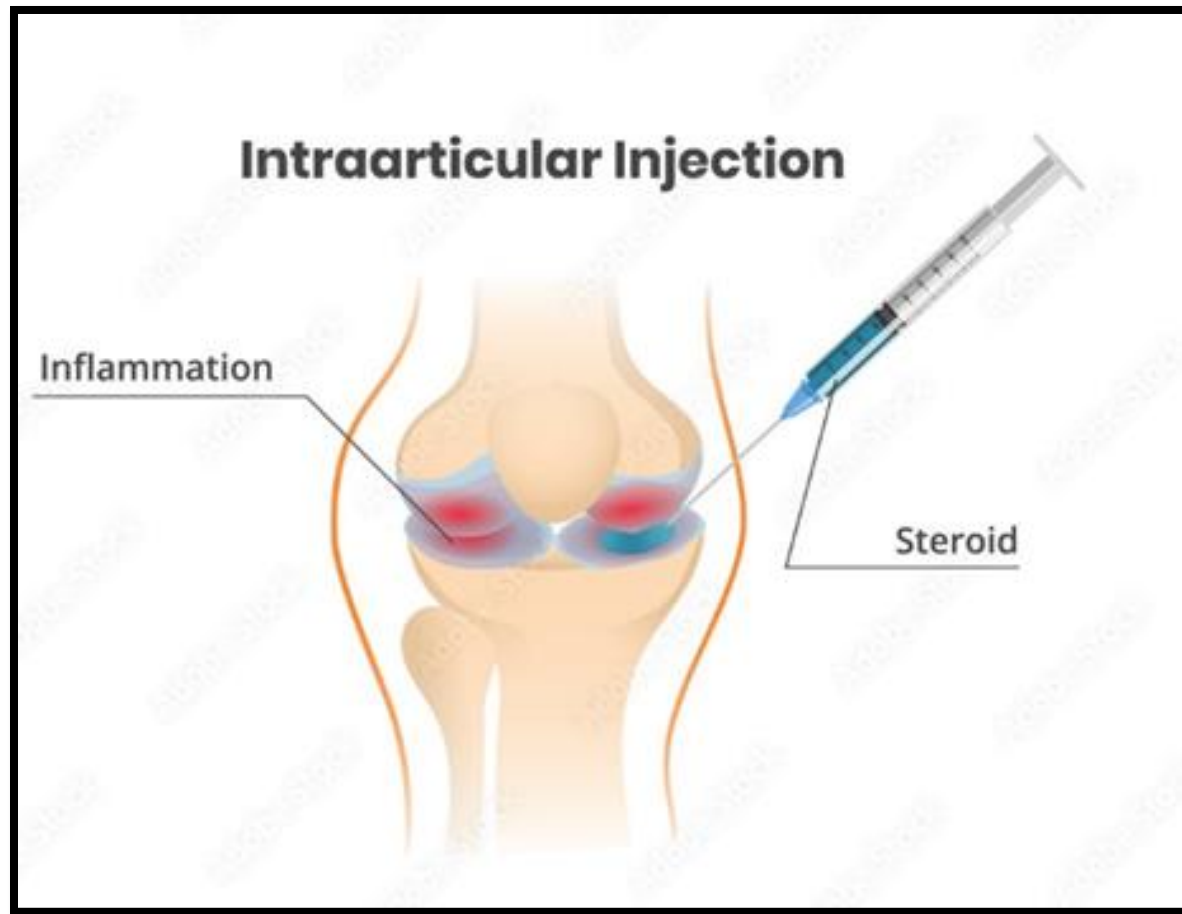

Management

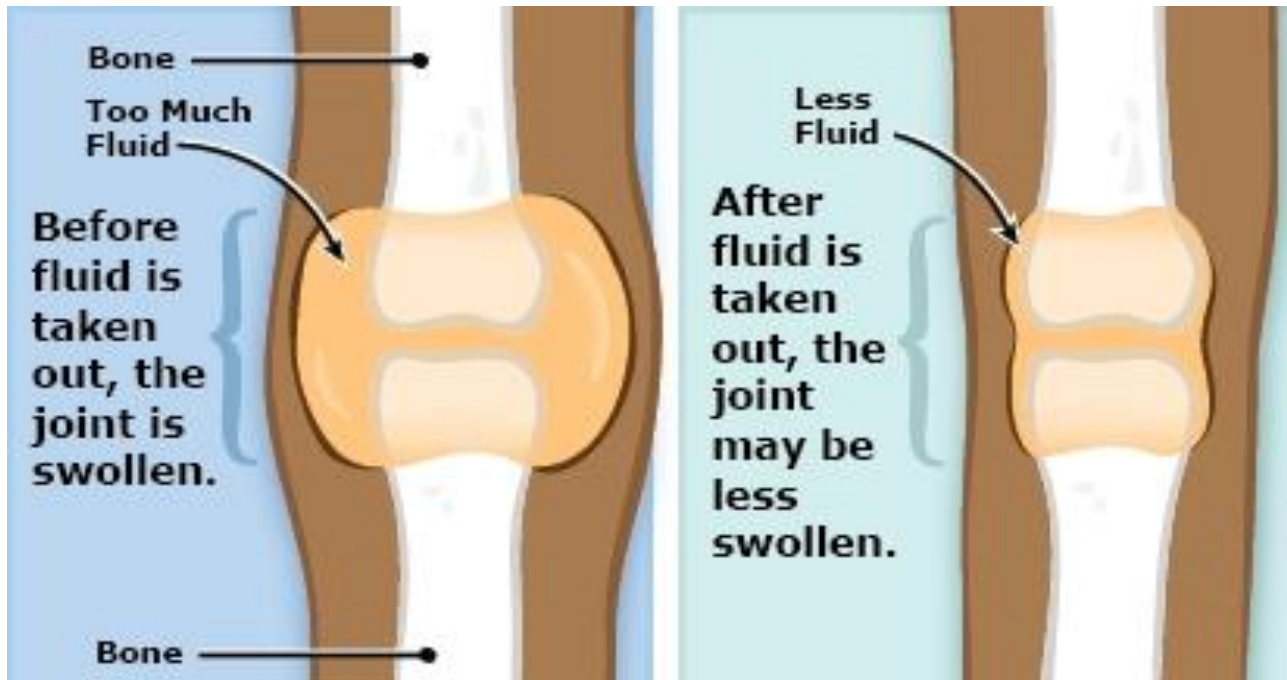

Drug Therapy: its goal :

- Relieve pain
- Reduce inflammation
- Stop / slow joint damage and deformity
- Improve well-being and ability to function

Medications

- NSAIDS
- Steroids (PO or intra-articular)

Arthrocentesis (aspiration fluid from joint) and x-rays can be performed

Surgical management : Joint replacement

Summary

- List 4 clinical manifestations of rheumatoid arthritis (R.A)
- List 4 nursing interventions for rheumatoid arthritis (R.A)
