

Identify the argument and conclusion:

Question 1

Passage: "Using restraints on elderly patients can lead to increased agitation and aggression. Therefore, restraints should be avoided."

Argument: _____

Conclusion: _____

Answer:

Argument: Using restraints on elderly patients can lead to negative consequences.

Conclusion: Restraints should be avoided.

Question 2

Passage: "Studies show that patient education improves medication adherence. Therefore, nurses should educate patients about their medications."

Argument: _____

Conclusion: _____

Answer:

Argument: Patient education improves medication adherence.

Conclusion: Nurses should educate patients about their medications.

True or False: This statement is an argument.

1. "We should invest in renewable energy because it's better for the environment and will reduce our reliance on fossil fuels."(This statement is an argument.)

TRUE (This statement provides evidence and reasoning to support the claim

2. "The new policy is effective." (is an argument.)

FALSE (This statement is a claim, but it's not an argument because it doesn't provide evidence or reasoning.)

Determine if the sentence is a statement or an argument:

1. "The sky appears blue because of the way light is scattered in the atmosphere."

- Argument

2. "Water boils at 100°C at sea level."

- Statement

3. "Why do birds migrate in the winter?"

Neither (It is a question, not a statement or argument.)

4. "Open the door, please!"

Neither (It is a command, not a statement or argument.)

Extract the conclusion:

1. "Vaccines stimulate the immune system to produce antibodies. This helps the body fight future infections. As a result, vaccinations are an effective method of disease prevention."

What is the conclusion?

- a) Vaccinations are an effective method of disease prevention.
- b) The immune system produces antibodies.
- c) Vaccines contain weakened viruses.
- d) The body fights infections naturally.

Answer: a) Vaccinations are an effective method of disease prevention.

2. **"Obesity increases the risk of cardiovascular diseases. Maintaining a healthy diet and exercising regularly can help control weight. Thus, adopting a healthy lifestyle reduces the risk of heart disease."**

What is the conclusion?

- a) Obesity increases the risk of cardiovascular diseases.
- b) Maintaining a healthy diet and exercising regularly can help control weight.
- c) Adopting a healthy lifestyle reduces the risk of heart disease.
- d) Cardiovascular diseases are common.

Answer: c) Adopting a healthy lifestyle reduces the risk of heart disease.

3. **"Dental sealants create a protective barrier on the chewing surfaces of molars. This barrier prevents food and bacteria from settling into deep grooves. As a result, sealants help reduce the risk of cavities."**

What is the conclusion?

- a) Dental sealants create a protective barrier on molars.
- b) Sealants prevent bacteria from settling into grooves.
- c) Sealants help reduce the risk of cavities.
- d) Molars are prone to cavities.

Answer: c) Sealants help reduce the risk of cavities.

1. **The word 'critical' in critical thinking comes from the Greek word 'kritikos,' which means:**
- a) To criticize
 - b) To argue
 - c) To judge
 - d) To solve

Answer: c) To judge

2. **Which of the following best describes an analytical thinker?**
- a) Someone who memorizes large amounts of data
 - b) Someone who breaks down complex ideas into simpler components
 - c) Someone who believes everything they read
 - d) Someone who refuses to listen to others

Answer: b) Someone who breaks down complex ideas into simpler components

3. **Which of the following is an example of applying critical thinking?**
- a) Accepting all information as true
 - b) Questioning the reliability of a news article before sharing it
 - c) Making decisions based on emotions rather than facts
 - d) Avoiding any discussion or debate

Answer: b) Questioning the reliability of a news article before sharing it

True or false:

1. **Creativity has no role in critical thinking.**

False (Creativity helps in generating new ideas and alternative solutions.)

2. **The metacognitive cycle involves planning, monitoring, evaluating, and regulating thought processes.**

True
