

Choose only one correct answer:

1. **It is assessing the effectiveness of the learning process and outcomes**

1. Evaluating Learning Process:	2. Planning learning process
3. Monitor Learning Process	4. Regulating learning process

2. **Is logical conclusions based on reviewing the facts, events.:**

1. Communication	2. Claims
3. Inference	4. Curiosity

3. **Involves setting goals and determining the best strategies for learning.**

1. Metacognition	2. Planning learning process
3. Monitoring and evaluation	4. Arranging thoughts.

4. **Wide range of cognitive skills needed to effectively identify, analyze, and evaluate arguments and truth claims.**

1. Effective communicators	2. Critical thinking
3. Analytical	4. Observers

5. **Analytical thinking involves:**

1. Observing	2. Skill.
3. Breaking down complex ideas into their simplest forms.	4. Identification

5. **Is defined as being logically connected and significant between the subject.**

5. Inference	6. Relevance
7. Monitoring	8. Regulating learning process

6. **Examine different sides of an issue without immediately dismissing them means you are:**

5. Effective communicator	6. Thinker
7. Open minded	8. Analytical

7. Organize arguments into basic statements and conclusions.

5. Clarify the arguments	6. Make the decision
7. Identify the claims	8. Evaluate the logic.

8. Look for conflicts statements

6. Clarify the arguments	7. Make the decision
8. Identify the claims	9. Evaluate the logic.

10. The planning, monitoring, evaluating and regulating of thought-processes is called

5. Observation	6. Argument
7. Metacognition	8. Critical thinking

9. Is logical conclusions based on reviewing the facts, events.:

9. Communication	10. Claims
11. Inference	12. Curiosity

10. Involves setting goals and determining the best strategies for learning.

9. Metacognition	10. Planning learning process
11. Monitoring and evaluation	12. Arranging thoughts.

11. Wide range of cognitive skills needed to effectively identify, analyze, and evaluate arguments and truth claims.

11. Effective communicators	12. Critical thinking
13. Analytical	14. Observers

15. Analytical thinking involves:

9. Observing	10. Skill.
11. Breaking down complex ideas into their simplest forms.	12. Identification

- 12. It is self-awareness and understanding of one's own thought processes and, in practice, involves: The planning, monitoring, evaluating and regulating of thought-processes.**

9. Curiosity	10. Observer
11. Metacognition	12. Critical thinker

- 13. It the wide range of cognitive skills needed to effectively identify, analyze, and evaluate arguments and truth claims.**

13. Argument	14. Claims
15. Critical thinking	16. Evaluation

- 14. Critical thinking consists of two components:**

13. Set of skills and act of applying it.	14. Planning and understanding
15. Monitoring and evaluation	16. Observing and willing

- 15. Higher -order thinking skills such as:**

16. Assessing logic and reason	17. Understanding
18. Remembering	19. Applying

20. Analytical thinking involves:

13. Observing	14. Skill.
15. Breaking down complex ideas into their simplest forms.	16. Identification

- 16. Introspection a process of examining our own thoughts and feelings. a form of**

13. Curiosity	14. Observer
---------------	--------------

15. Metacognition	16. Critical thinker
-------------------	----------------------

17. Continually seek new information is called :

17. Communication	18. Claims
19. Critical thinking	20. Curiosity

18. Involves setting goals and determining the best strategies for learning.

17. Metacognition	18. Planning learning process
19. Monitoring and evaluation	20. Arranging thoughts.

19. Critical thinking requires people able to listen because they are

21. Effective communicators	22. Thinkers
23. Analytical	24. Observers

25. Analytical thinking involves:

17. Observing	18. Skill.
19. Breaking down complex ideas into their simplest forms.	20. Identification

20. It is Making adjustments to improve future learning based on evaluations:

17. Planning learning process	18. Regulating learning process
19. Metacognition	20. Critical thinking

21. I notice + I already know = So now I am thinking, it is called:

21. Argument	22. Claims
23. Critical thinking	24. Inference equation

22. Applying critical thinking doesn't mean:

21. Being negative or focusing on faults.	22. Understanding
---	-------------------

23. Observer	24. Observing and willing
--------------	---------------------------

23. Higher -order thinking skills such as:

26. Assessing logic and reason	27. Understanding
28. Remembering	29. Applying

30. Good critical thinking is making reliable..... based on reliable information.:

21. Planning	22. Understanding
23. Judgment	24. claims
